EDUCATION

Connecticut College

New London, Connecticut

Bachelor of Arts, Computer Science

2019-2025

- GPA: 3.9
- Relevant Coursework: Data Structures, Discrete Math, Computer Organization, Algorithms, Data Science, Blockchain Technologies, Operating Systems
- Publication: *Uncovering the Nature and Impact of Affective Feedback in Teaching and Learning*

EXPERIENCE

Connecticut College | *Research Assistant*

March 2020 – September 2024

- Co-authored a research paper on the impact of integrating Sentimental Feedback into classroom activities by analyzing data from two Computer Science courses using sentiment analysis in Python.
- Visualized feedback and sentiment trends using Python libraries including Pandas, NumPy, and Matplotlib.
- Conducted independent research on Zero-Knowledge Proofs in voting systems, and implemented a prototype using the Mina blockchain to explore cryptographic verifiability and voter privacy.
- Technologies used: Python, IBM Watson, Ruby on Rails, Ruby, Mina Protocol

DeWave | *Full Stack Developer*

January 2024 - Present

- Migrated code base to a monorepo architecture using TurboRepo and created a reusable component library.
- Analyzed web bundle size and reduced it by 30% by code splitting, lazy loading and proper tree shaking.
- Built a yacht charter platform using NextJS, Supabase and third party APIs.
- Developed multiple APIs for the platform using NextJS API routes and cron scripts to synchronize data.
- Technologies used: NextJS, React, TypeScript, Supabase, NodeJS, REST, TurboRepo

SELISE | *Jr. Software Engineer*

November 2020 - February 2022

- Lead the go-live of a resource management platform project, worth CHF 500,000, for Switzerland's largest retail company within a short duration of 3 months using Angular and REST API.
- Maintained and developed features for a wholesale internet selling portal for one of Switzerland's largest Telco company. Overhauled the 5 year code base from AngularJS to Angular in 6 months using Angular and GraphQL.
- Reduced time taken for new product addition from 1.5 months to 2 weeks. A reduction in time by almost 70%.
- Refactored multiple GraphQL queries to use fragments and directives to reduce query sizes
- Technologies used: Angular, Preact, Redux, NGRX, GraphQL, Git, SCSS, Typescript, BitBucket Pipelines

Oddiyana | *Freelance Developer*

February 2022 – January 2023

- Freelanced for Oddiyana, developing blockchain-based crypto games and NFT game prototypes from concept to working demos.
- Built interactive game frontends using React and integrated wallet connectivity and smart contract interactions for token-based gameplay.
- Worked across the full development cycle, including requirement gathering, prototyping, testing, and deployment.
- Technologies used: React, Typescript, Web3.js, Ethers.js, Solidity, Netlify

PROJECTS

Zimchu

January 2023 - Present

- Developed a Python-based web scraper using Selenium to extract apartment listings from Facebook groups, intercepted API responses, and leveraged ChatGPT API for JSON data extraction from unstructured text.
- Architected and deployed a React-based apartment search platform for Thimphu, achieving 40 daily views and engaging 18+ active users.
- Technologies used: React, TypeScript, Supabase, Python, Selenium

Cert-Tainty

July 2021

- Developed a full-stack NFT minting platform to issue school degrees as cryptographically verifiable certificates on the Polygon blockchain.
- Designed and built the entire website, integrating smart contract interactions and NFT issuance with a user-friendly frontend.
- Won 1st place at a national hackathon, receiving a cash prize of Nu. 500,000.
- Technologies used: React, JavaScript, Solidity, Web3.js, Polygon, Firebase
