EDUCATION

Connecticut College

New London, Connecticut

Bachelor of Arts, Computer Science

2019-2025

- GPA: 3.9
- Relevant Coursework: Data Structures, Discrete Math, Computer Organization, Algorithms, Data Science, Operating Systems
- Publication: *Uncovering the Nature and Impact of Affective Feedback in Teaching and Learning*

EXPERIENCE

Gainforest/Hypercerts | *Software Engineer*

January 2025 - Present

- Developed the Hypercerts v2 protocol on atproto, contributing core features and protocol-level implementation details for production use.
- Owned and maintained core infrastructure, including indexers and a custom PDS, improving reliability and data consistency across services.
- Built agentic monitoring workflows and tooling for proactive detection, triage, and debugging of protocol and infra issues.

DeWave | *Full Stack Developer*

January 2024 - November 2025

- Migrated the codebase to a Turborepo monorepo and built a reusable component library to speed up cross-project development.
- Reduced web bundle size by 30% through code splitting, lazy loading, and improved tree shaking.
- Built a yacht charter platform using Next.js, Supabase, and third-party APIs.
- Developed API routes and 24-hour sync jobs to ingest third-party API data into Elasticsearch, keeping search data accurate and up to date.

SELISE | *Jr. Software Engineer*

November 2020 - February 2022

- Led go-live delivery of a CHF 500,000 resource management platform for Switzerland's largest retailer within a 3-month timeline using Angular and REST APIs.
- Maintained and developed features for a wholesale sales portal for a major Swiss telco, and helped modernize a 5-year codebase from AngularJS to Angular in 6 months using Angular and GraphQL.
- Reduced new product onboarding time from 1.5 months to 2 weeks (nearly 70% faster).
- Refactored GraphQL queries with fragments and directives to reduce query size and improve maintainability.

Pyoor | *Freelance Developer*

February 2022 - January 2023

- Maintained and shipped features for a vendor booking platform built on a legacy React codebase.
- Introduced TypeScript and Redux Toolkit, and implemented vendor simulation dashboards using ApexCharts and React.
- Owned end-to-end delivery from requirements and testing to Netlify deployment and ongoing maintenance.

Connecticut College | *Research Assistant*

March 2020 - September 2020

- Co-authored a research paper on integrating affective feedback into classroom activities by analyzing data from two computer science courses using Python-based sentiment analysis.
- Built feedback and sentiment visualizations using Pandas, NumPy, and Matplotlib to support analysis and reporting.

PROJECTS

Zimchu

January 2023 - Present

- Developed a Python-based web scraper using Selenium to extract apartment listings from Facebook groups, intercepted API responses, and leveraged ChatGPT API for JSON data extraction from unstructured text.
- Architected and deployed a React-based apartment search platform for Thimphu, achieving 40 daily views and engaging 18+ active users.
- Technologies used: React, TypeScript, Supabase, Python, Selenium

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, Ruby, HTML/CSS

Frameworks/Tools: React, Next.js, Angular, Supabase, GraphQL, REST, Git, GitHub Actions
